

Avian Influenza Prevention & Pandemic Preparedness

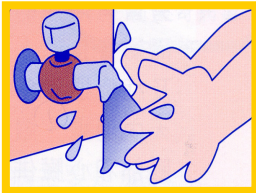

Receiving Area

PERSONAL HYGIENE

ROUTINE HAND WASHING

1. Wash hands up to elbows vigorously for at least 20 seconds with antimicrobial hand soap and warm water.
2. Rinse with water and dry with disposable paper towel or air blower
3. Apply alcohol-based hand sanitizer and rub into skin until dry (15-30 seconds).
4. **Endure 300** can be used for quick hand sanitizing, and should be done in conjunction with regular hand washing. Paying special attention to fingernails and between fingers.
* Hand sanitizer cannot replace regular hand washings

RECEIVING POULTRY

POINTS TO NOTE

- ✓ Ensure a proper source of poultry supply.
- ✓ Receive fresh poultry at 5°C or lower. There should be no discoloration, the texture should be firm and springs back when touched and have no odor.
- ✓ Fresh poultry should be received packed on self-draining crushed ice or in chill packs.
- ✓ Follow the standard receiving procedure for Poultry, and reject them when they have following characteristics:
 - Purplish or green discoloration around the neck
 - Abnormal or unpleasant odor
 - Stickiness under the wings and around joints
 - Dark wing tips (red tips are acceptable)

Proper Hand Washing is the most important and effective means of minimizing risk of any disease and can be applied to every area.

STORAGE OF POULTRY

1. Store them in a separate area in the refrigeration unit at 5°C or below and ensure that there is no chance of any cross-contamination.
2. Poultry should be kept in the bottom most compartment in the refrigerator
3. During preparation, use clean and sanitized work areas, cutting boards, knives, and utensils.
4. Prepare raw meat separately from fresh produce.
5. Be sure to use clean gloves, change them before you start each new task and wash your hands again before putting on a new pair of gloves.
